

## **Cambridge International Examinations**

Cambridge International Level 1/Level 2 Certificate

CANDIDATE NUMBER	
	0610/33 May/June 2014 1 hour 15 minutes

## **READ THESE INSTRUCTIONS FIRST**

No Additional Materials are required.

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

The syllabus is approved for use in England, Wales and Northern Ireland as a Cambridge International Level 1/Level 2 Certificate.

© UCLES 2014

1 Fungi were often classified as different species according to their visible reproductive structures.

Penicillium dodgei and Eupenicillium brefeldianum were classified as different species because they had different types of spores.

However, recently it was recognised that the spores of *P. dodgei* were asexual spores, while those of *E. brefeldianum* were sexual spores. A comparison of the DNA of these two fungi shows that they are the same species.

This fungus is now known as Penicillium brefeldianum.

(a)	Sta	te how DNA analysis can show that <i>P. dodgei</i> and <i>E. brefeldianum</i> are the same species.
		[0]
(b)	(i)	Describe how a fungus, such as <i>P. brefeldianum</i> , reproduces asexually.
	(ii)	Discuss the advantages of <b>asexual</b> reproduction.
		[3]

[Total: 8]

2

Sul	fur dioxide (SO <sub>2</sub> ) can cause acid rain.
(a)	Name one other pollutant that can cause acid rain.
	[1]
(b)	Describe the effects of acid rain on the environment.
	[3]
(c)	State <b>three</b> methods to reduce atmospheric SO <sub>2</sub> pollution.
	2
	3
	[3]

(d) Scientists in China measured the concentration of sulfur dioxide (SO<sub>2</sub>) in the atmosphere and sulfur in plant tissues from 1990 until 2005. They did not record any measurements between 1990 and 1996.

Their results are shown in Fig. 2.1.

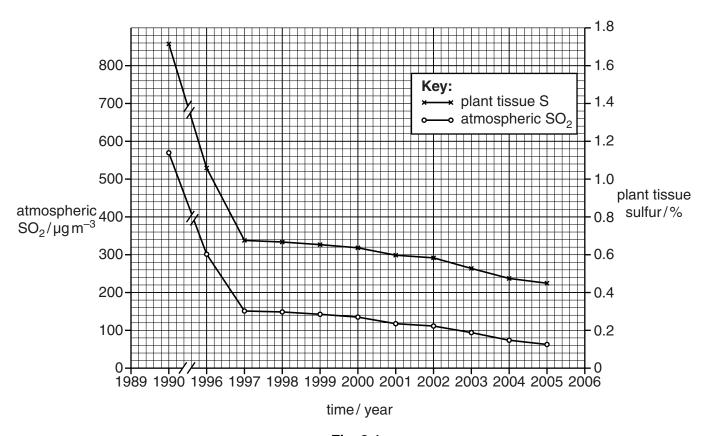

Fig. 2.1

plant tissues as shown in Fig. 2.1. You will gain support your answer.	credit for using the data in the graph to
	[3]

Describe the trends in the concentrations of sulfur found in the atmosphere and in the

3

(a)	Define the term sensitivity.
	[2]
(b)	Describe how voluntary actions differ from involuntary actions.
	[2]
(c)	Name the neurone that transmits impulses from a receptor.
	[1]
(d)	Reaction time is defined as the time taken to respond to a stimulus.
` '	During a swimming relay race, the reaction times of four swimmers in two teams, <b>A</b> and <b>B</b> .

During a swimming relay race, the reaction times of four swimmers in two teams, **A** and **B**, were recorded.

In each team, swimmer 1 responded to the sound of the start gun; swimmers 2, 3 and 4 responded to seeing the previous swimmer touch the swimming pool wall.

Table 3.1 shows the reaction times for the swimming relay teams.

Table 3.1

owimm or	reaction	n time/s
swimmer	team <b>A</b>	team <b>B</b>
1	0.81	0.75
2	0.48	0.40
3	0.58	0.06
4	0.31	0.35

	Compare the reaction time of swimmer 1 in each team with the reaction times of the other swimmers in each team. Use the information in Table 3.1 to support your answer.
	[3]
(e)	Adrenaline is often secreted during sporting competitions.
	Outline how adrenaline affects the performance of a swimmer.
	[3]
	[Total: 11]

**4 (a)** Fig. 4.1 shows a section through the anther of a lily flower. The cells in the centre are dividing by meiosis.

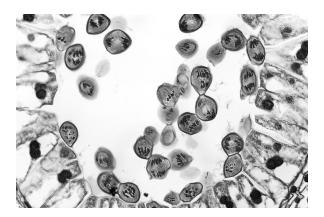

Fig. 4.1

(i)	Name the product of meiosis that is formed in anthers.
	[1
(ii)	Explain the importance of meiosis in sexual reproduction.
	23

**(b)** Fig. 4.2 shows a flower of *Lilium polyphyllum*, a lily that grows in the Himalayan mountains. This species is cross-pollinated by insects.

Fig. 4.2

(i)	Explain what is meant by <i>cross-pollination</i> .	
		[2
(ii)	Name one feature visible in Fig. 4.2 that helps to attract insects.	
		[1

(c)		nts of this species that grow at low altitudes produce flowers 60 days before the plants of same species that grow at high altitudes.
	(i)	Suggest <b>one</b> environmental reason why lilies that grow at lower altitudes flower earlier than the lilies at higher altitudes.
		[1]
	(ii)	Explain why flowering time is an example of continuous variation.
		[2]
( <del>d</del> )	Soid	
(d)		entists think that plants of <i>L. polyphyllum</i> growing at high altitudes may evolve into a new cies.
	Exp	lain how natural selection could lead to the evolution of a new species of lily.
		[5]
		[Total: 14]

**5** Fig. 5.1 shows a cross-section of a kidney.

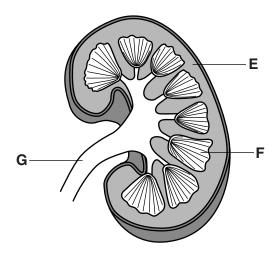

Fig. 5.1

	9
(a)	Name the structures labelled, <b>E</b> , <b>F</b> and <b>G</b> as shown in Fig. 5.1.
	E
	F
	<b>G</b>
(b)	Explain the function of the renal capsule in the kidney.
	[3]

(c)	Glucose is reabsorbed,	back into the	blood, by	active	transport
-----	------------------------	---------------	-----------	--------	-----------

Define active transport.	
	[2]
Give <b>one</b> example, other than glucose, of a substance that is reabsorbed into the renal tubule.	the blood from
	[1]

(e) Dialysis is a treatment for kidney disease.

Fig. 5.2 shows a dialysis machine.

(d)

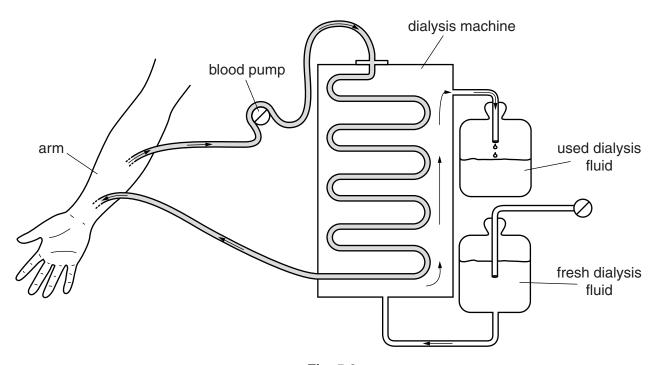

Fig. 5.2

(i) The composition of the dialysis fluid changes as it passes through the dialysis machine.

Complete Table 5.1 using the words 'low', 'high', 'same' or 'none' to show how the concentration of each substance changes in the dialysis fluid.

The last one has been done for you.

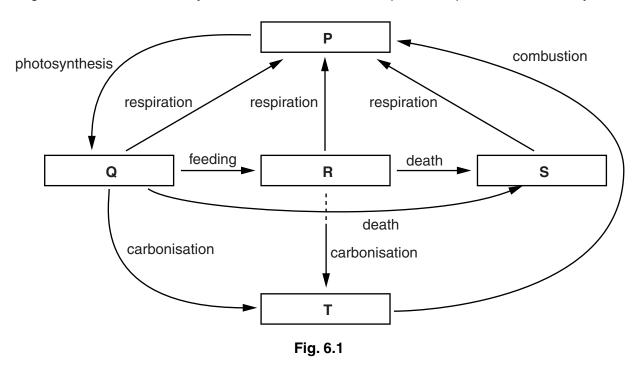

Table 5.1

		concentration of substance in:			
substanc	blood before dialysis	<b>used</b> dialysis fluid	fresh dialysis fluid		
glucose	normal				
salts	high				
urea	high				
toxins	high	high	low	[3]	
(ii) Explain how a dialysis machine filters blood.					
				[4]	
(f) Kidney transplants are the most common organ transplants.					
Desc	Describe the <b>advantages</b> of a kidney transplant compared with dialysis.				
•••••					

(g)	Before a kidney is transplanted,	it is important to	match the tissue	e type of the d	lonor with the
	tissue type of the recipient.				

State why this is necessary.	
	[1]
	[Total: 20]

6 Fig. 6.1 shows the carbon cycle. P, Q, R, S and T each represent a part of the carbon cycle.

(a) Complete Table 6.1 by identifying P, Q, R and S and the name of **one** example of a carbon compound found in each. T has been completed for you.

Table 6.1

letter	part of cycle	carbon compound found in each part
Р		
Q		
R		
s		
Т	fossil fuels, e.g. natural gas	methane

[4]

(b)	Photosynthesis is a very important process in the carbon cycle.	
	Explain how the process of photosynthesis converts carbon compounds from ${\bf P}$ to carbon compounds in ${\bf Q}$ .	bon
		[5]
(c)	The rate of photosynthesis varies as a result of changes in environmental factors.	
	State <b>one</b> environmental factor and explain how it can affect the rate of photosynthesis.	
		[3]

(d) Environmental factors can be controlled in glasshous	(d)	Environmental	factors can	be controlled	in glasshouse
